Sowdeeswaran27@gmail.com

Summary

DevOps Engineer with a strong focus on results, possessing 6+ years of practical IT experience. During my 3.5 years with AWS. I have worked extensively on DevOps, designing, implementing, and optimizing CI/CD pipelines, automating infrastructure, and fostering a culture of collaboration between development and operations teams. Seeking a challenging role where I can apply my expertise to enhance DevOps technologies and best practices.

- Experienced IT professional with a strong background as an **AWS DevOps Engineer**, specializing in automating and optimizing critical **deployments** in AWS. Proficient in configuration management, **CI/CD** pipelines, and implementing cloud strategies across diverse environments
- Setup/Managing Linux Servers/ Windows server / Ubuntu servers on **AmazonEC2**.
- Setup/Managing Databases on **Amazon RDS, MSSQL, MYSQL, Mongo DB**.
- Monitoring servers through Amazon CloudWatch, Nagios, Observium, Prometheus & Grafana,SQS, SNS.
- **Creating/Managing DNS records on Amazon Route 53 and go-daddy panel**.
- Excellent skills in applying **Continuous Integration and Continuous Delivery**.
- Create **S3 Buckets** for maintaining application logs and involved in setting Lifecycle policy for managing the logs efficiently.
- Involved in creating **Docker Images** by writing custom **Docker File**.
- Excellent skills in applying Continuous Integration, Continuous Deployment and Continuous Delivery processes & tools **GIT, Maven, Jenkins, Terraform, Nginx, Apache, Shell Scripting, Docker, Kubernetes etc**.
- Worked on **Jenkins** by installing, configuring and maintaining for the purpose of continuous integration (CI) and for End-to-End automation for all build and deployments.
- Having basic knowledge of **Asp.net core, PHP-Lawravel, .Net core, Python Technologies**.
- Used **Terraform** for Configuration Management.
- Managed **GitHub** repositories and permissions, including branching and tagging.
- Containerizing applications with **Docker**. Responsible for managing the Docker private registry.
- Having Good experience in Amazon Web Services environment and good knowledge of AWS services like **Elastic Compute Cloud (EC2), Elastic Load Balancers, IAM, S3, Cloud Front, RDS, VPC, Route53, Cloud Watch, Cloud Formation,lambda**.
- Utilized Cloud Watch to monitor resources such as **EC2, CPU memory, EBS volumes**; to set alarms for notification or automated actions; and to monitor logs for a better understanding and operation of the system.
- Worked on optimizing volumes and EC2 instances and created multiple VPC'S.
- Implementation of **NAT gateway** for Webapps hosted in private subnets.
- Setup and configured **EIP** to EC2 instances.
- Created Alarms and notifications for EC2 instances using **Cloud Watch, SNS, SQS**. Designing and Deploying
- Highly scalable infrastructure using **ELB** and **Auto Scaling services**.
- Creating S3 buckets and also managing policies for **S3 buckets** and Utilized S3 bucket and **Glacier** for storage and backup on AWS.
- **Also creating VM in proxmox in On-Premises Servers, responsible for application deployment in ASP.net core, PHP-Laravel, HTML , python framwork. Automated with Jenkins.**

TechnicalSkills

- **Configuration Automation Tools**
  Ansible, Terraform, Cloud Formation, AWS CDK
- **Containerization Orchestration**
  Docker, ECS, EKS, Kubernetes
- **Security tools**
  IAM, ACM
- **CI/CD**
  Gitlab, Jenkins
- **Source Code Management**
  Github
- **Defect Tracking Tool**
  Jira
- **Build tools**
  Maven
- **Webserver**
  Apache, Nginx, Tomcat
- **CloudPlatform**
  AWS
- **Scripting**
  Bash, Shell, python
- **Monitoring tools**
  Nagious, Observium, Grafana & Prometheus, Uptime kuma, Splunk
- **Operating System**
  Linux, Ubuntu, Windows, Centos 7
- **Code coverage Tool**
  SonarQube
- **Database**
  MySQL, SQL Server 2012 NoSQL: Dynamo DB (AWS)

WORK EXPERIENCE

- TGK Streamline Solutions **|** Chennai, from January-2019, to Present

Client: Vontier

Responsibilities:

- Build and deployments under different testing environments starting from development to staging and production.
- Working Experience on **GitHub**, **Git**, **Jenkins**. Debugging issues if there is any failure in broken
- **Jenkins** build and maintaining **Jenkins** build pipeline.
- Expertise Knowledge in version control system in **GIT**.
- Hands-on knowledge on **CI/CD** pipeline.
- Created shell scripts to automate **CI/CD** process.
- Good knowledge on Linux Administration.
- Experience with **Linux/Unix** environments and scripting for Build & Release automation.
- Installed **Jenkins** custom Plugins, handled administration, backup and migration activities.
- Experienced on Branching, Merging concepts in Version Control tool like **GIT.**
- Strong experience on build tools and packaging the source code using **Maven**.
- Experience in maintaining in **Nexus** artifactory repository mangers maven builds.
- Experience in maintaining application servers like **Apache Tomcat**.
- Experience in code covering tool **Sonarqube** maintaining quality control and quality gates as per client requirement.
- Experience in various DevOps tools such as provisioning scripts, deployment tools, development and staging environments on **AWS** and using **Ansible**.
- Working experience on **docker containerization** tool and deployed various applications to various environments.

- Good experience on Amazon Web Services (AWS), Creating EC2 Instances and configuring all necessary services end to end.
- Created virtual infrastructure by using **VPC** service.
- Performed continuous Build and Deployments to multiple UAT and Production environments. Worked on Service now ticketing tool.
- Experienced in deployment of applications on **Apache Web server, Nix and Application Servers such as Tomcat.**

Client: BuildMyMart

Responsibilities:

- Managed source code and version control using **Git**, ensuring efficient collaboration and code integrity across development teams.
- Automated the provisioning of cloud resources including **VPCs, EC2** instances, databases, and networking components using **Terraform** in AWS.
- Integrated **Ansible** with **Jenkins** to automate deployment processes and improve continuous integration and continuous delivery **(CI/CD)** workflows.
- Set up and maintained **Jenkins** master-slave (agent) architecture for distributed builds, improving performance and optimizing resource utilization.
- Configuring the setup of **Apache Tomcat servers** using **Ansible**, including deployment of web applications and management of server configurations.
- Knowledge on Application Monitoring Tools like **Prometheus, Grafana** and Log Monitoring Tools like **Splunk**.
- Implemented security best practices such as **IAM** roles/policies, **VPC**, and security groups in **Terraform** code to ensure infrastructure adheres to security and compliance requirements.
- Set up and configured **SonarQube** to work seamlessly with version control systems like **Git, GitHub** enabling automatic analysis on code commits and pull request.
- Provisioned and managed **EC2** instances for various environments, ensuring high availability and fault tolerance across multiple availability zones.
- Implemented monitoring solutions such as **Prometheus, Grafana** for nodes and **CloudWatch** for AWS resources, ensuring proactive monitoring of system metrics and application health.
- Set up **S3** event notifications to trigger actions based on object-level operations like uploads, deletions, and changes.
- Integrated **AWS Lambda** with various AWS services like **S3, DynamoDB, SQS, SNS** Gateway to process events, automate workflows, and build responsive applications.
- Deployed and managed Bastion Hosts within **VPCs** to securely administer instances in private subnets, limiting **SSH access** to trusted IP ranges.

Client: omda Health

Responsibilities:

- Designed and deployed a microservices architecture using **Docker**, **Kubernetes**, and **Terraform**, ensuring high availability, scalability, and fault tolerance.
- Provisioned **AWS** infrastructure using **Terraform**, automating the deployment of **EKS, VPC, Subnets, Security Groups, IAM roles, S3, and Route 53.**
- Containerized microservices with **Docker** and deployed them on **Amazon EKS**, ensuring efficient resource utilization and portability.
- Configured **Kubernetes** components including **Namespaces, Deployments, Services, StatefulSets, and Ingress** Controllers for microservices isolation and traffic management.
- Implemented **Kubernetes** auto-scaling using **HPA** and **Cluster Autoscaler**, optimizing performance based on workload demand.
- Developed **CI/CD pipelines** using **AWS CodePipeline**, or **Jenkins**, automating **Docker builds, Terraform** infrastructure provisioning, **Kubernetes deployments**, and **rollbacks**.

- Optimized service networking using **AWS Load Balancer Controller, Kubernetes Ingress, and AWS Route 53**, ensuring efficient traffic routing and security.
- Secured Kubernetes workloads with **RBAC, IAM roles, pod security policies**, and AWS Secrets Manager for access control and sensitive data management.
- Implemented service mesh solutions like **Istio** or **AWS App Mesh** for microservices communication, security, and observability.
- Enhanced monitoring and logging using Amazon Managed **Prometheus, Grafana, AWS CloudWatch.**
- Logged and traced microservices transactions using **AWS X-Ray** and **Fluentd**, improving debugging and troubleshooting.
- Enabled disaster recovery and high availability by deploying microservices across multiple AWS availability zones with **Terraform-managed Auto Scaling groups**.
- **Reduced infrastructure costs** by **25%** using Terraform to provision **AWS Spot Instances, Compute Savings Plans, and optimized Kubernetes resources.**
- **Implemented rolling updates and blue-green deployments in Kubernetes**, ensuring zero-downtime application releases.

EDUCATION

Bsc. Computer Scince at Goverment college of Arts and Scince (2013 - 2016)

Declaration

I hereby declare the above-mentioned details are true and correct to the best of my knowledge.
